

Introducing the Dataset

Coding Platform Dataset

The dataset is from a hypothetical coding platform. Users come and submit their solutions to existing problems on the platform and improve their programming skills.

The datasets has three tables - **Users, Problems, Submissions**

Users table

1. **user_id** - unique ID assigned to each user
2. **country** - location of user
3. **rating** - rating of user

Problems table

1. **problem_id** - unique ID assigned to each problem
2. **level_type** - the difficulty level of the problem between 'A' to 'N'
3. **points** - amount of points for the problem
4. **tags** - problem tag(s) like greedy, graphs, DFS etc.

Submissions table

1. **user_id** - unique ID assigned to each user
2. **problem_id** - unique ID assigned to each problem
3. **attempts_range** - the range no. in which attempts the user made to get the solution accepted lies
